

Old Way

New Way

WHY MAKE THE SWITCH?

Many companies are looking at **Green** Initiative Programs. One way to accomplish a **Green** program is to replace fiber drums, cardboard boxes, wood pallets and super sacks with reusable containers. Customers are realizing a ROI in less than a year. Protecting the environment is an important part of our lives in which we all play a part. DW Global takes this **“Going Green”** seriously. During the past year we’ve researched several issues facing handling and processing within different types of industries. We have some innovative ideas to share with you. One area we found of tremendous value for handling in many industries, be it plastics, pharmaceutical, food, sand, etc. is a multi-purpose dry bulk hopper.

ADDED BENEFITS

| <ul style="list-style-type: none"> • Provides a reusable container, eliminating the need for fiber drums, cardboard boxes, wood pallets and super sacks. • With secure lid, allows manufacturer to ship material to processing manufacturing organization. • Improved Weighing and Batching System, along with the use of a vacuum system, ensures material availability. • Eliminates downtime and fatigue factors. | <ul style="list-style-type: none"> • Dry bulk hopper can be stacked up to 3 high for a total of 2,400 lbs. Each hopper contains a valve underneath for easy flow of materials from hopper to manufacturing machine. • The dry bulk hoppers can be filled and stacked for recurring scheduled orders, making the process much more efficient. • Our hoppers improve handling, increase productivity, and most of all eliminate waste. |
